

Fusion Installer Release Notes

VERSION: 3.8; BUILD DATE: 2016-09-16

New Features

- Downloads from the internet now show progress and can be cancelled. In addition, they start from where they left off if the download was interrupted.
- Fusion Installer is now officially compatible with Windows 10.
- Fusion Installer now checks with Fusion Server when it launches and auto-upgrades itself if Fusion Server has a newer version of Fusion Installer.
- The installer now detects when Fusion Server is being installed at a brand new site from a USB drive and offers to copy the other install files to the server so other computers can pull install files across the network.
